

Calling all engineers ...

Could this be you?

You have a good engineering degree, preferably chem, mech or elec eng. You may have recently graduated or you could have years of experience in the process industries. You have strong communication skills, making you particularly effective in one or more of the following: facilitating collaborative work groups; driving projects through to completion; developing and editing technical documents; maintaining website content; promoting a point of view to a target audience.

You're comfortable applying your engineering knowledge in these ways. Working for an Association based in the City sounds attractive.

Could this be you? E-mail your C.V. and an indication whether you're interested in project assignments, part-time or full-time work, to

enquiries@eemua.org
